Dayparts	8
Price	€2.100,00 excl. VAT No extra costs.

What is Functional application management introduction

Successful business operations is increasingly dependent on well functioning information systems. Too little - or incorrect - focus on the Functional Management of these systems will inevitably lead to higher costs and lower revenues.

After this training you will have a full understanding, in your role as a Functional (Application) Administrator, of what you can do for your company's interests in the areas of continuity and flexibility.

Not only the role of the administrator, but also of the process owner and other IT functions are taken into consideration. It is precisely the interaction between these roles, including an Administrator who knows how to position his role, that is necessary for the desired result. We will focus on the "Objects of management" as Policies - Users - Functionality - Data - Documentation followed by the associated approach and techniques.

Who should attend Functional application management introduction

This training is designed for people who want to have a insight into the modern vision around information management. For those who are concerned with or responsible for the information process or its use within the information domain.

You work for example as:

- Functional Administrator
- Functional Application Administrator
- Data Administrator
- Various roles in information management
