Spoken Language	Dutch
Language Materials	English
Dayparts	2
Price	€645,00 excl. VAT No extra costs.

What is Agile Architecture

An Agile approach enables a smooth translation of the dynamic environment in which your organization operates. Effective software can be developed that takes into account unexpected changes. It provides the added benefits of a shorter time-to-market for products and services because necessary software is delivered on time and within budget.

Agile is developing into a de facto standard for managing change in organizations. This requires not only changes in the processes and procedures, but also a radical change in attitude and behavior of all those involved, and therefore it has an impact on the role of the architect.

How does Agile actually affect the role of the architect and the way your business and IT architecture operates and what are the consequences for you? This one-day training provides the answer. In a highly interactive and practical manner you are provided with concrete approaches and tips and clues around Agile architecture, all of them based on best practices and first-hand experience. The training is given by architects with experience in architecture and Agile.

At the end of this training you will be able to:

- Describe the requirements that working in Agile expects from the behaviour and competences of the Architect
- Describe the requirements that working in Agile expects from the Architecture deliverables
- Name the Agile principles you can use with the creation of an architecture
- Describe the architecture role in Agile software development
- Explain the added value of architecture in Agile organizations
- Describe how organisations combine Agile en Architecture

At the end of the training, you will be able to start working in Agile projects and Agile organizations. This allows you to provide added value in your role as Architect.

Who should attend Agile Architecture

The training is aimed at architects who want to better highlight the added value of architecture for Agile environments and want to show what essential skills an architect has for Agile development.

To really benefit from this training, it is recommended to have at least some experience as an architect.
