What is Practitioner in Agile Quality (PAQ)

Agile software development allows organizations to respond to changes in the market faster and with more confidence.

Through agile working, products and services can be brought to the market faster, so that companies can faster add value for their customers.

The Practitioner in Agile Quality training takes the participant into agile practice, with an emphasis on the most important competencies for working in high performance agile teams.

The Practitioner training in Agile Quality focuses on different competencies that contribute to being able to work successfully in Agile teams:

- Agile mindset: putting soft skills of the Agile Manifesto and agile principles into practice;
- Fast delivery: Delivery optimization through the implementation of efficient and effective methods;
- Built-in quality: Implementing team activities to ensure that the quality objectives are achieved during the product life cycle;
- Engineering principles: Develop "first time right", with as much value as possible through repeatable, verifiable and adaptable processes, with as little as possible "technical debt";
- Continuous testing: Continuous development and testing, whereby the product is tested against the definition of done during each iteration;
- Scalability: Identify additional risks and changes that are necessary to effectively scale processes based on team size and / or distribution.

Who should attend the Practitioner in Agile Quality (PAQ)

This training is ideal for testers, test coordinators and test managers who want to delve further into the Agile way of working.

In addition, this training is suitable for anyone interested in testing activities in an Agile environment, such as project managers or developers.

The training covers three days.

Day 1 consists of an introduction, followed by the "engineering principles", a practical exercise, "fast delivery" and a sprint practical exercise.

On day 2 the following components will be discussed: planning, continuous testing, built-in quality, sprint practice and a practice exam. Finally, on day 3, "debt and test driven development", "agile mindset", sprint practice and "scalability" are treated.

Day three ends with a practical exam.

The price of the exam is included in the price of the training.

Prerequisites

This is a practical training. The participant is expected to have knowledge and / or experience in the following areas:

Basic knowledge of Agile / Scrum

Basic knowledge of test terminology

Knowledge of test design techniques, including limit value analysis, decision tables etc.

Understand the difference between functional and non-functional testing

Objectives
