

IoT in a day

Group Training

Training code	CGAIOTIDCE
Spoken Language	Dutch
Language Materials	Dutch
Dayparts	2
Price	€800,00 excl. VAT No extra costs.

What is IoT in a Day

Internet of Things (IoT) is a catch-all for a booming market in which we use data from sensor technologies to make our environment smarter. In this age of digital, there are no discussions anymore about the value of data. By means of IoT, a new source of data has been found. IoT can be applied in our direct surroundings, like your house and your car, the shops you visit, but most likely also in your professional working environment. By using sensor technology in a smart way, relevant data is gathered, analyzed, and converted into information which then enables us to make smart decisions.

In this one-day training, you will understand what IoT is and how it can be used. You will also get answers to questions like: what has IoT to offer in my professional working environment? How can IoT be applied? How can data from IoT lead to smart decisions, and which use case(s) may be relevant to me? Several real-life examples of use cases will be demonstrated.

IoT on itself is not IT, but IT is essential when analyzing your data. Collaboration with your IT department is thus essential. But how to position IoT and IT in an end-to-end approach, where is the dividing line, and who is responsible for the different elements in the topology? This and much more is made clear in this training, and for those questions that have not been answered, Capgemini can surely help.

Who should attend IoT in a Day

- Business Analysts: Understand how IoT data can provide insights for better decision-making.
- IT Managers: Learn how to integrate IoT with existing IT infrastructure.
- Operations Managers: Discover how IoT can optimize operational efficiency.
- Product Managers: Explore how IoT can enhance product features and customer experience.
- Data Scientists: Gain insights into new data sources and analytical techniques.
- Engineers: Learn about the technical aspects of IoT implementation.
- Consultants: Understand how to advise clients on IoT strategies.

- Marketing Professionals: Discover how IoT data can inform marketing strategies.
- Executives: Learn about the strategic implications of IoT for your business.

Prerequisites

Basic understanding of data analysis and IT infrastructure. No prior IoT knowledge or experience is required.

Objectives

At the end of the training you will be able to:

- Understand the fundamentals of IoT and its applications.
- Identify relevant IoT use cases in various industries.
- Acknowledge the relevancy of IoT data to make informed decisions.
- Collaborate effectively with IT departments for IoT projects.
- Develop strategies for integrating IoT into business processes.
