What is Data Management & Data Governance

In the era of data-driven working and Industry 4.0, the importance of well-managed data is increasing. Data Management encompasses all processes, techniques, and skills required to properly manage data. Data Governance, on the other hand, is the system of roles, agreements, and responsibilities that ensures that data management can be properly organized and managed. It's the "management of data management", you could say.

Who should attend Data Management & Data Governance

- People who are (or want to be) employed in a Data Governance role or organization.
- Enterprise architects and data architects: Professionals who need to include Data Management aspects including Data Governance in their architecture.
- Data Stewards: Those responsible for data quality and governance within their organization.
- Business Analysts and Information Analysts: Professionals who need to understand the importance of data management and governance in decision-making.
- Data Analysts: Professionals who work with data and need to understand how to manage and govern it effectively.
- IT Managers: Individuals who oversee IT systems and need to ensure data is well-managed and governed.
- Project Managers: Individuals overseeing projects involving significant amounts of data.

Prerequisites

There are no specific requirements to participate in this training. However, some years of experience within

an organization for which data plays an important role makes the subject matter more recognizable and applicable.

Objectives

At the end of the training you will be able to:

- Understand the differences and interaction between Data Governance & Data Management.
- Develop a business case for Data Governance & Data Management.
- Understand the main standard frameworks for Data Governance & Data Management: DAMA-DMBOK, EDM Council DCAM, CMMI DMM.
- Understand the organizational structure of Data Governance & Data Management, and the role of Data Owners and Data Stewards within it.

The training is delivered by people with broad experience within Data Management and Data Governance. They are therefore able to translate theory into practical examples and advice, adapted to and tailored to the background of the trainees.
