What is Introduction To Testing

Are you a starter in the world of quality assurance and testing? But you don't have any experience and would like to be prepared as quick as possible and in the best possible way? Then this training is really the thing for you!

In this training you will be taken into the world of the daily practice of the software tester. Together with an experienced coach you get acquainted with all activities, techniques, hard and soft skills that are important for a tester.

Questions which will be discussed within this training:

- What is testing really?
- Why is testing important?
- What kind of documentation is there and why is this important for testing?
- How to set up a test?
- What are test scripts and how do I make them?
- How do I register findings?
- What are test techniques and how do I use them?
- How to make a test strategy?
- What kind of soft skills are important for a tester?
- How is testing related to a DevOps way of working?
- And much more.....

After this training you are ready to start working as a tester in practice. Possibly you can also go for a certification like TMAP or ISTQB. However, this is not the goal of this training.

Who should attend Introduction To Testing

This training is developed for everyone who want to dive into the world of quality assurance and testing. This can be by anyone who is starting in this area: functional application managers, business analysts, developers,

etc.

Prerequisites

For this training a basis level regarding software development is expected.
During this training you need a laptop with access to internet.

Objectives

You learn the basic principles of quality assurance and testing. You also learn the basic principles of the new T-Map methodology (Quality For Cross Functional Teams). You evaluate on your current situation and determine what would be the best approach for your organization regarding quality and testing. You will also learn how to set up and deploy your tests in a practical and structured way. At the end of the training you will be well aware of all the basic principles of testing.
