### What is Machine Learning in Python

Machine Learning in Python is a comprehensive training that introduces you to the process of extracting insights from large amounts of data using Python, the most widely used programming language in Data Science. You will learn about various concepts such as CRISP-DM, Scikit-learn, K-fold Cross-Validation, Random Forest, K-means Clustering, Quantile Regressors, and Convolutional Neural Network. The training will guide you on how to set up a Machine Learning pipeline in Python, improve data quality, and detect and prevent model drift. The training emphasizes the application of learned concepts through practical cases, facilitated by trainers who have real-world experience with Machine Learning systems in Python.

## Who should attend Machine Learning in Python

- Data Analysts: Enhance your data analysis skills by learning to extract insights from large datasets.
- Data Scientists: Learn to build efficient Machine Learning pipelines in Python.
- Data Engineers and Software Engineers: Expand your skill set by learning the most widely used programming language in Data Science.

#### Prerequisites

Beginning skills and general knowledge of Python, in particular Pandas for data manipulation and Seaborn or Matplotlib for creating visualisations. The 'Introduction Python' training addresses these topics and is ideally suited for pre-training.

During this training you need a laptop on which you can install software: Python.

#### Objectives

At the end of the training, you will be able to:

- Set up a Machine Learning pipeline in Python.
- Understand the advantages and disadvantages of different Machine Learning algorithms.
- Extract insights from large amounts of data.

This training is designed to provide you with the most relevant and up-to-date knowledge in the field of Machine Learning using Python.

## **About Capgemini Academy**

Capgemini Academy's professionals offer what people in IT need. Our professionals have a keen eye for motivation, talent and are aware of specific contexts and circumstances. They move people to move. Programmes and courses that originate from daily experience of our both didactical and substantively strong trainers, light a fire within the individual IT professionals. Real life stories of our professionals' experience that tell how to solve problems and work with the people around it, do the rest.

An organization, like ours, helps people and their organizations day by day to get the best out of themselves and each other. We prepare them to defy tomorrow's challenges. We stimulate learning and curiosity. In order for individual IT professionals and their employers, to build better, longer and more intensive relationships. For mutual benefit.
